JULY KEY POINTS

TREND ESTIMATES

EMPLOYMENT

 rose by 7,900, to 8,330,600. In recent months full-time and part-time employment have been rising, and in July 1996 stand at 6,273,300 and 2,057,300, respectively.

UNEMPLOYMENT

• fell to 771,800 in July 1996.

UNEMPLOYMENT RATE

has fallen slightly in recent months but in rounded terms, remains steady at 8.5%.

PARTICIPATION RATE

actually fell by 0.1 percentage points, but due to rounding stands at 63.4%.

SEASONALLY ADJUSTED ESTIMATES

EMPLOYMENT

• rose by 9,800 to 8,343,200. Part-time employment fell by 40,500 to 2,042,100, with a fall in female part-time employment of 30,900. Full-time employment rose by 50,200 to 6,301,100 with female full-time employment rising by 34,800.

UNEMPLOYMENT

rose by 15,400 to 772,500, with female unemployment rising by 16,400 to 329,100.

UNEMPLOYMENT RATE

- rose by 0.1 percentage points, but due to rounding stands at 8.5%. The male rate
 was 8.5%, while the female rate rose by 0.4 percentage points to 8.4%.
- NSW 7.9% (7.7% last month); Vic. 8.6% (8.1%); Qld 9.0% (9.4%); SA 9.2% (8.8%);
 WA 7.6% (8.2%); Tas. 11.2% (10.6%).

PARTICIPATION RATE

rose by 0.1 percentage points to 63.5%.

FORTHCOMING CHANGES

From August this year the ABS will progressively introduce the use of telephone interviewing into the Labour Force Survey. Households selected for the Labour Force Survey are interviewed each month for 8 months, with one eighth of the sample being replaced each month. The first interview will continue to be conducted face-to-face. Subsequent interviews will then be conducted by telephone (if feasible and acceptable to the respondent). Telephone interviewing will be phased in for each new sample group from August 1996 and will be fully implemented by February 1997. The ABS is confident that the adoption of this method will result in no noticeable impact on key estimates of employment or unemployment.

The introduction of telephone interviewing is the first of a number of changes being implemented in the Labour Force Survey. Other major changes include a redesign of the survey questionnaire and the introduction of computer assisted interviewing methods, both of which will occur at a later date. Details of telephone interviewing and other planned changes were published in the article Upcoming Changes to the Labour Force Survey published in the October 1995 issue of *Labour Force, Australia* (6203.0). For further details contact Geoff Neideck on (06) 252 6753.

ROUNDING

Estimates of monthly change shown on page 1 have been calculated using unrounded estimates, and may be different from, but are more accurate than, movements obtained from the rounded estimates. The graphs on page 1 also depict movements calculated from unrounded estimates.

SAMPLING ERRORS

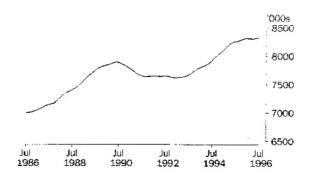

The estimates in this publication are based on a sample survey. Because the entire population is not enumerated, the published estimates and the movements derived from them are subject to sampling variability. Standard errors give a measure of this variability and appear on pages 30 and 31.

W. McLennan Australian Statistician

PRINCIPAL LABOUR FORCE SERIES: Trend estimates

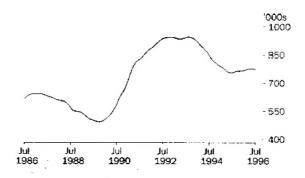

EMPLOYED PERSONS

After reaching a high of 7,894,000 in June 1990, trend estimates of employment fell by 3.5 per cent to 7,617,200 in January 1993. Trend estimates rose over the next three years and reached 8,318,200 in January 1996. After a short period of slow decline, trend estimates have risen to 8,330,600 in July 1996.

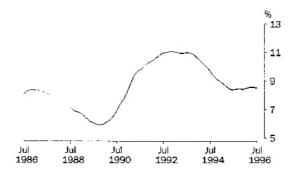

UNEMPLOYED PERSONS

Trend estimates of unemployment rose from 491,400 in October 1989, to a high of 946,800 in September 1993. The trend then fell steadily, to a low of 754,600 in June 1995. The trend then began to rise slowly, before falling again in more recent months, to 771,800 in July 1996.

UNEMPLOYMENT RATE

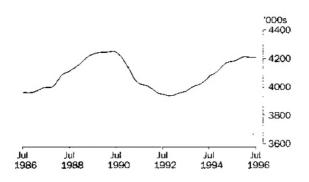

From a low of 5.9 per cent in late 1989, the trend unemployment rate rose to a peak of 11.0 per cent in late 1992 and early 1993. The rate then fell steadily to 8.4 per cent in mid 1995 and remained relatively steady for the rest of the year. The trend stands at 8.5 per cent in July 1996.

MALES EMPLOYED FULL TIME

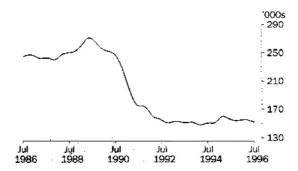

TOTAL

Male full-time employment rose to 4,249,500 in May 1990 before falling by 7.4 per cent to 3,936,700 in November 1992. A period of sustained increase followed, with the rate of growth slowing in mid 1995. In recent months, the trend has remained relatively flat, and stands at 4,207,700 in July 1996.

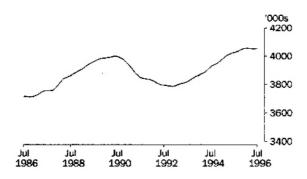

MALES AGED 15-19

Trend estimates of male junior full-time employment reached a peak of 271,200 in May 1989, and then fell markedly to a low of 147,800 in March 1994. By March 1995, the trend had risen again to 160,500. The trend then declined, and remained steady around 155,000 until March 1996. In July 1996, the trend estimate had fallen to 152,200.

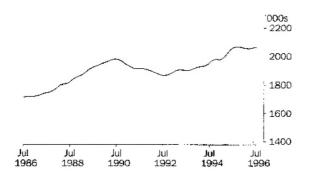

MALES AGED 20 AND OVER Adult male full-time employment fell from a peak of 4,000,600 in June 1990 to 3,785,100 in December 1992. The trend then rose to a peak of 4,056,700 in February 1996, and has remained relatively steady since, to stand at 4,055,500 in July 1996.

FEMALES EMPLOYED FULL TIME

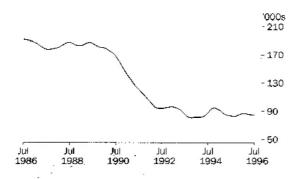

TOTAL

The trend in female full-time employment generally declined from 1,979,900 in June 1990 to 1,864,600 in August 1992. After small falls in mid 1993 and late 1994, the trend rose to peak at 2,067,100 in September 1995. For the rest of 1995 and early 1996, the trend showed moderate falls, before rising in recent months to 2,065,600 in July 1996.

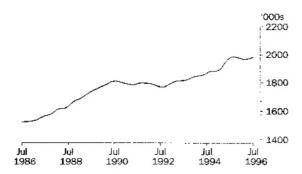

FEMALES AGED 15-19

After falling steadily from 187,700 in May 1989 to 94,100 in June 1992, trend junior female full-time employment has remained low compared with levels reached in the late 1980's. In July 1996, the trend stood at 84,800 and has been falling slowly for the last five months.

FEMALES AGED 20 AND OVER

Trend female adult full-time employment rose to 1,811,300 in July 1990 before generally declining, to reach 1,770,200 in August 1992. The trend then continued to rise, to reach 1,984,100 in September 1995. After a period of slow decline, the trend has begun to rise in recent months, to stand at 1,980,800 in July 1996.

¹ Trend estimates for January 1996 to June 1996 have been revised. Estimates for the most recent three months may be sub-ect to significant revisions as data for later months become available.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains preliminary estimates of the civilian labour force derived from the labour force survey component of the monthly population survey. Estimates for the current month are preliminary and subject to revision. Revised estimates for the current month and more detailed estimates will be published in *Labour Force, Australia* (6203.0).

MONTHLY POPULATION SURVEY

2 The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about 0.5% of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

SCOPE OF SURVEY

3 The Labour Force Survey includes all persons aged 15 and over except members of the permanent defence forces, certain diplomatic personnel of overseas governments customarily excluded from census and estimated populations, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia.

COVERAGE

4 In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are necessarily a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the survey is considered to be negligible.

POPULATION BENCHMARKS

5 Labour Force Survey estimates are calculated in such a way as to add up to independent estimates of the civilian population aged 15 and over (population benchmarks). From February 1994, labour force estimates have been compiled using benchmarks based on the results of the 1991 Census of Population and Housing. Small revisions were made to many of the historical estimates from January 1989 to January 1994.

REVISION OF SERIES

6 From April 1986, the definition of employed persons was changed to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. contributing family workers). For further information, see paragraphs 36 and 37 of the Explanatory Notes to the February 1987 issue of *The Labour Force, Australia* (6203.0).

SURVEY SAMPLE REDESIGN

- **7** The Labour Force Survey sample was redesigned and reselected using information collected in the 1991 Census of Population and Housing. The new sample was phased in over the period September to December 1992. For details, see *Information Paper: Labour Force Survey Sample Design* (6269.0).
- **8** For the most part, one quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place. Replacement generally occurred at the rotation group level with two groups being substituted each month. Such a pattern of implementation meant that any changes to labour force estimates due to differences between the two samples, or any other influences, were spread over the four months rather than being concentrated in one inter-month period.
- **9** This phase-in scheme applied to the private dwelling sample in urban areas. The new sample for non-private dwellings and private dwellings in rural areas was introduced in a single stage in November 1992.

RELIABILITY OF ESTIMATES

10 Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error.

Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown on pages 30 and 31. Standard errors of other estimates and other movements may be determined by using information in the Technical Notes in *Labour Force*, *Australia* (6203.0).

Non sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures.

SEASONAL ADJUSTMENT AND TREND ESTIMATION

- **11** Seasonally adjusted series are published in Tables 2, 5 and 12 to 17. Seasonal factors are reviewed annually to take account of each additional year's original data. The results of the latest review were used to compile the revised seasonally adjusted and trend estimates given in this publication. Information about the method of adjustment and revised seasonally adjusted and trend estimates for all months from January 1991 were published in an appendix to the February 1996 issue of *Labour Force*, *Australia* (6203.0).
- **12** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

Employment: 5 in 10 monthly movements Unemployment: 7 in 10 monthly movements Unemployment rate: 7 in 10 monthly movements Participation rate: 9 in 10 monthly movements

- 13 The smoothing of seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series, and creates trend estimates. These trend estimates are derived by applying a 13-term. Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally adjusted series. Trend series are used to analyse the underlying behaviour of the series over time. These are published in Tables 3, 6 and 12 to 19.
- **14** While this smoothing technique enables estimates to be produced for the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

SEASONAL ADJUSTMENT AND TREND EST: MATION (continued)

- 15 Trend estimates are published for the Northern Territory in Table 18 and for the Australian Capital Territory in Table 19. Unadjusted series for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month to month revisions. They may be affected by revision resulting from the annual re-analysis of seasonal factors.
- **16** For further information, see *A Guide to Interpreting Time Series Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

RELATED PUBLICATIONS

- **17** Users may also wish to refer to *Labour Force, Australia* (6203.0). This publication contains a detailed list of related publications which are available from ABS Bookshops.
- **18** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

UNPUBLISHED STATISTICS

19 As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be made to Don Clark on 06 252 6525 or to any ABS office.

EFFECTS OF ROUNDING

- **20** Estimates have been rounded and discrepancies may occur between sums of the component items and totals.
- **21** Estimates of movement shown in this publication are obtained by taking the difference of unrounded estimates. The movement estimate is then rounded to one decimal place. Therefore where a discrepancy occurs between the reported movement and the difference of the rounded estimates, the reported movement will be more accurate.

SYMBOLS AND OTHER USAGES

- * subject to sampling variability too high for most practical uses. See the Technical Notes in 6203.0 for more details.

Actively looking for work

Includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service noticeboards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

Attending school

Persons aged 15 to 19 enrolled full time at secondary or high schools in the reference week.

Attending tertiary educational institution full time

Persons aged 15 to 24 enrolled full time at a TAFE college, university, or other educational institution in the reference week.

Employed

Persons aged 15 and over who, during the reference week:

- worked for one hour or more for pay, profit, commission or payment in kind in a
 job or business, or on a farm (comprising employees, employers and own
 account workers); or
- worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
- were employees who had a job but were not at work and were;
 - on paid leave, on leave without pay for less than four weeks up to the end
 of the reference week,
 - stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week,
 - on strike or locked out,
 - = on workers' compensation and expected to be returning to their job, or
 - receiving wages or salary while undertaking full-time study; or
- were employers, own account workers or contributing family workers who had a
 job, business or farm, but were not at work.

Full-time workers

Employed persons who usually worked 35 hours or more a week (in all jobs) and those who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week

Labour force

For any group, persons who were employed or unemployed, as defined.

Labour force status

A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Not in the labour force

Persons who were not in the categories employed or unemployed as defined.

Participation rate

For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.

Part-time workers

Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

Seasonally adjusted series

A time series of estimates with the estimated effects of normal seasonal variation removed. See Explanatory Note 11 to 12 for more detail.

Trend series

A smoothed seasonally adjusted series of estimates. See Explanatory Notes 13 to 15 for more detail.

| Unemi | ployed |
|-------|--------|
| | |

Persons aged 15 and over who were not employed during the reference week, and:

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
 - were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week), or
 - were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
- were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Unemployed looking for first full-time job

Unemployed persons looking for full-time work (as defined above) who had never worked full time for two weeks or more

Unemployed looking for full-time work

Unemployed persons who actively looked for full-time work, or were to resume a full-time job from which they had been stood down.

Unemployed looking for part-time work

Unemployed persons who had actively looked for part-time work only, or were to resume a part-time job from which they had been stood down.

Unemployment rate

For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

The estimates in this publication are based on information gained from the occupants of a sample survey of dwellings. Because the entire population is not surveyed, the published estimates are subject to sampling error. The most common way of quantifying such sampling error is to calculate the standard error for the published estimate or statistic.

LEVEL ESTIMATES

To illustrate, let us say the published level estimate for employed persons aged 15 to 19 is 500.000. The calculated standard error in this case is 9,000. The standard error is then used to interpret the level estimate of 500,000. For instance, the standard error of 9,000 indicates that:

- There are approximately two chances in three that the real value falls within the range 491,000 to 509,000 (500,000 + or 9,000)
- There are approximately nineteen chances in twenty that the real value falls within the range 482,000 to 518,000 (500,000 + or 18,000)

The real value in this case is the result we would obtain if we could enumerate the total population.

The following tables show the standard errors for this month's level estimates.

MOVEMENT ESTIMATES

The following example illustrates how to use the standard error to interpret a movement estimate. Let us say that one month the published level estimate for females employed part time in Australia is 1,387,000; the next month the published level estimate is 1,400,000. The calculated standard error for the movement estimate is 10,400. The standard error is then used to interpret the published movement estimate of 13,000. For instance, the standard error of 10,400 indicates that:

- There are approximately two chances in three that the real movement over the two month period falls within the range 2,600 to 23,400 (13,000 + or 10,400)
- There are approximately nineteen chances in twenty that the real movement falls within the range -7,800 to 33,800 (13,000 + or 20,800).

The following tables show the standard errors for this month's movement estimates.

| * | | | • • • • • • • | * * * * * * | | * * * * * * * * | * * * * * * * * * * * * * * * | ****** | * * * * * * | * - * * * * * * * | * * * * * | | | |

WHAT IF...? REVISIONS TO TREND ESTIMATES

EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Each time new seasonally adjusted estimates become available, trend estimates are revised (see paragraphs 13 and 14 of Explanatory Notes).

TREND REVISIONS

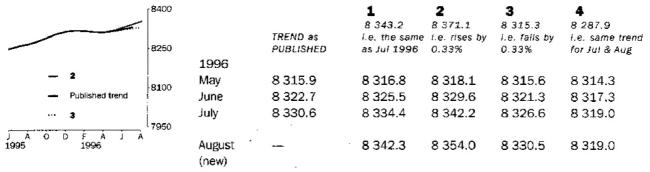

The examples in the tables below show four illustrative scenarios and the consequent revisions to previous trend estimates of employment and unemployment rate.

- 1 The August seasonally adjusted estimate is the same as the July estimate.
- 2 The August seasonally adjusted estimate is higher than the July estimate by:
 - > +0.33% for employment
 - +2.2% for the unemployment rate
- 3 The August seasonally adjusted estimate is lower than the July estimate by:
 - ≈ -0.33% for employment
- **4** The August seasonally adjusted estimate results in a revised July trend estimate which is identical to the new August trend estimate.

The percentage changes of 0.33% and 2.2% were chosen because they represent the average absolute monthly percentage changes in employment and the unemployment rate respectively.
